

CABINETS & COUNTERTOPS FOR MULTIFAMILY

Kitchen cabinets & counters for multifamily.

One supplier for the whole kitchen package: cabinets and tops, designed to fit real walls and delivered to site labeled by unit.

Range

Framed or frameless. Shaker to slab. Paint, wood, laminate, two-tone. Quartz, granite, laminate tops.

Design help

Layouts planned for the half-inch, so boxes land clean and RFIs stay low.

Supply only

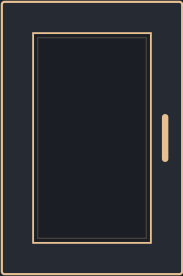

Delivered to site, labeled by unit and floor. Your crew keeps the install.

PROJECT REFERENCE Bristle & Main · 155 units · 3580 Main St, Hartford CT

DOOR STYLES

Whatever door the spec calls for.

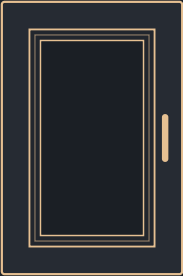

Available door styles include shaker, slab, recessed panel, raised panel and beadboard. Pick one per unit type, or tier them across the building. The same door and the same color go on every floor.

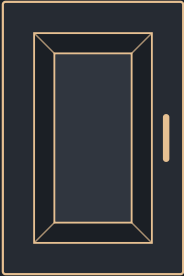

Shaker
The workhorse for market-rate rentals. Clean, timeless and easy to keep consistent.

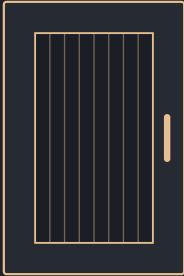

Slab / flat panel
Modern and value. Fewest edges, quick to clean, and sharp in dark or wood-grain finishes.

Recessed panel
A step up from shaker, with a profiled inner edge. Fits mid- to upper-tier units.

Raised panel
Traditional look for condo, senior and classic-market buildings.

Beadboard
Cottage character for islands, accents or a signature unit type.

Glass-front uppers and other specialty doors are available for amenity kitchens and accents.

FINISHES

Finishes that repeat across hundreds of kitchens.

Available finishes include painted, stained wood, thermofoil/laminate and two-tone combinations.

Painted

White Off-white Dove gray Sage Navy Charcoal Matte black

Stained wood

Natural oak Honey Walnut Espresso

Thermofoil / laminate

Matte white Gloss white Gray wood-grain Light oak grain Graphite

Two-tone · uppers / bases

White / navy White / oak Gray / black Off-white / charcoal

Swatches are representative only. Final colors are approved from physical door samples during submittals.

CONSTRUCTION

Framed or frameless, built to your spec.

We supply both. Each drawing is a top-view section of a two-door base. Pick by look, budget and how your crew installs.

Frameless · full-access, European

TOP VIEW · SECTION

1 Box side carries the load

2 Edge-banded front edge

3 Back panel

4 Adjustable shelf

5 Concealed hinge, side-mounted

6 Full-overlay doors, tight even gaps

7 No frame: full-width opening

PROS

• More usable interior and wider drawers

• Clean, modern lines

• Efficient on repeating layouts

CONS

• Less forgiving of out-of-square walls; set it level and plumb

• Exposed edges depend on edge banding

Face-frame · framed, American

TOP VIEW · SECTION

1 Box side

2 Face frame stile

3 Back panel

4 Adjustable shelf

5 Hinge mounts to the frame

6 Center stile between doors

7 Partial or full overlay; frame shows at the reveal

PROS

• Frame adds rigidity and a forgiving mounting edge

• Traditional look

• Familiar to most install crews

CONS

• Stiles narrow the opening and drawers

• More material in the box

BOX MATERIALS

Plywood, MDF or particleboard: matched to the budget and the room.

MATERIAL	STRENGTH	MOISTURE	COST	TYPICAL USE
Plywood	●●● Best screw-holding; lighter weight	●●● Most tolerant of the three	\$\$\$	Sink bases, market-rate and upgrade packages
MDF	●●● Dense, flat and stable; heavy	●●● Swells if edges get wet	\$\$\$	Painted doors, end panels, fillers
Particleboard / melamine	●●● Solid when built well; lower screw-holding	●●● Faces resist water; raw edges don't	\$\$\$	Value units, box interiors, shelves

In plain English: plywood is cross-layered wood veneer, the strongest and most water-tolerant option. Particleboard is pressed wood particles faced with melamine, the value spec. Many packages mix the two, for example plywood sink bases with melamine boxes elsewhere.

HARDWARE & OPTIONS

Standard or upgrade: you pick, by unit type.

Both tiers are on the table. Run standard hardware in value units and upgrade the market-rate floors, or hold one spec building-wide.

	STANDARD	UPGRADE
Hinges	Regular concealed hinges	Soft-close concealed hinges
Drawer slides	Regular drawer slides	Soft-close, full-extension slides
Drawer box	Standard (stapled) drawer box	Dovetail drawer box
Cabinet box	Particleboard / melamine	Plywood

Drawer boxes
Dovetail for long life, stapled for value.

Crown & light rail
Finish the tops of uppers and hide under-cabinet lighting.

Fillers & panels
Planned fillers and finished end panels for clean runs.

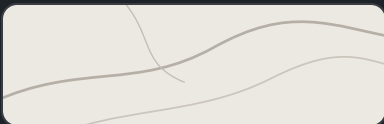

Pulls & knobs
Bar pulls, D-pulls or knobs in the finish you specify.

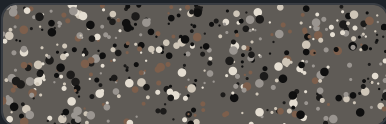

COUNTERTOPS

Countertops on the same order.

Counters are coordinated with the cabinet order: one takeoff, one schedule, one supplier. Tops are designed knowing the crew trims on site, and the problem corners and reveals are worked out up front. Edge profiles, backsplashes and sink cutouts follow your spec.

Quartz
Consistent color and pattern across hundreds of units. Low maintenance.

Granite
Natural stone, durable and classic. Every slab varies a little.

Laminate
The lowest-cost top and quick to replace. Fits value and workforce units.

ACCESSIBLE & COMPLIANT UNITS

ADA and Fair Housing units, supplied to your drawings.

Accessible kitchens ship with the rest of the building: same doors, same finishes, labeled by unit. We supply cabinets and counters to the accessible-unit specs on your drawings, so those units look like every other unit.

34" max

Accessible counter / work surface height (typical)

27" min

Knee clearance height under the work surface (typical)

30" min

Knee space width at sink or work surface (typical)

Removable

Base and sink cabinets that open up knee space

What we supply for accessible units

- **Lowered counter sections** at the work-surface and sink heights on your drawings.
- **Knee space** with removable base or sink cabinets, plus finished panels where they're exposed.
- **Reachable upper heights:** uppers mounted lower or lowered shelving, as drawn.
- **Accessible hardware:** D-pulls in place of knobs.
- **Matching finishes** so accessible units look like the rest of the building.

HUD / Fair Housing units

Fair Housing Act covered units and adaptable kitchens get the same treatment: removable base cabinets where future knee space is drawn, and clearances as your architect sets them. Each one is tracked as its own line in the unit-type schedule, so none get missed at delivery.

Dimensions shown are typical references, not a compliance guarantee. Final dimensions follow the project's drawings and code review. The design professional of record sets the requirements, and installation is by others.

BUILT FOR MULTIFAMILY

Built for 40 units and up, not one-off remodels.

The whole program is set up around repeating unit types and a clean handoff to your install crew.

Unit-type takeoffs

Taken off by unit type, with repeatable layouts priced once and built many times.

Labeled for delivery

Labeled by unit and floor, so the crew stages and sets without hunting.

Supply only

We supply. Installation is by others. You keep your crew and that margin.

Delivered to site

Landed and delivered to your job in CT, NY, NJ and PA.

Design help

We help design the kitchens, not just ship boxes.

DESIGN HELP

Designed to fit real walls.

- **Plan for the half-inch.** Twenty apartments can each be off by half an inch. Layouts use planned fillers, so the boxes absorb the error instead of the GC.
- **Blind corners with play.** On U-shaped kitchens, BL39 to BL42 blind corners give about 3" of adjustment when walls come in off-dimension.
- **Counters built for real installs.** Tops are designed knowing the crew trims on site, with corners and reveals solved up front.
- **Fewer RFIs and change orders.** Faster installs and a consistent finished look in every unit.

HOW A PROJECT WORKS

1

Plans

Send unit drawings, the finish schedule and unit counts.

2

Takeoff & design

We take it off by unit type and tune layouts: fillers, blind corners, counter reveals.

3

Submittals & samples

You approve shop drawings, door and finish samples, and spec sheets.

4

Delivery

Delivered to site, labeled by unit and floor, ready for your crew.

SUBMITTAL PACKAGE

Shop drawings

Door & finish samples

Spec sheets

PROJECT SPEC SHEET

Mark it up and send it back with your plans.

Check what the project calls for. Leave anything open and we'll propose options in the takeoff.
